

The Affordable Hospitality Solution

We offer more than just a telephone system!

When arriving at a Hotel or an Apartment room for that long awaited holiday, your guest accommodation should be inviting and simplistic to make their stay pleasant and enjoyable.

So it's important that every technology feature that is included in the room is user friendly and not complicated or frustrating to use.

This is why the Hybrex system is known worldwide for its quality and simplicity of operation for guests using the system, as well as rotational staffing requirements of a venue.

No matter what type of guest accommodation you're providing, whether it be a motel, hotel, serviced apartments, aged care facilities or a nursing home, having the ability to provide a simple and effective solution for your guest is the answer. This type of service is always welcome by guests who stay on a regular basis and is always a deciding factor when considering repeat stays.

About Hybrex

Hybrex telephone systems have been available in Australia since 1989.

As such we now have 26 years of experience behind us in servicing business communications needs and the Hospitality industry in particular.

In other parts of the world, our product is marketed under the name of TransTel Communications with our systems now sold in more than 53 countries.

Since being introduced to Australia, we have supplied in excess of 50,000 Hybrex telephone systems to our Channel Partners across Australia. Many of these systems have been installed into Hospitality venues, such as Hotels, Motels, B&B's, Serviced Apartments and Apartment buildings, including a number of Four Star and higher rated venues.

Awareness of Hybrex products has increased significantly over time with many businesses, including Hospitality venues, choosing Hybrex systems for their needs. The popularity of Hybrex systems has been attributed to the features and reliability of the product, and the commitment by our Channel Partners to support the products across Australia.

Hybrex has been commended on the number and usefulness of features available on its systems by Hospitality operators all over Australia. We continue to research the needs of the Hospitality industry, endeavouring to develop new solutions to meet the needs of the industry and their guests.

In addition to telephony capabilities, Hybrex also offers specialised features such as Access Control, Paging, and Intercom solutions. These features and many others are available on our one operating system, reducing the need for multiple systems and their cost.

In addition to the existing Emergency features of Hybrex a new feature has been added. Known as the "Emergency Evacuation Alert" this new feature allows the venue operator to trigger the playing of a pre-recorded message in the event of an building emergency event. This recording, once activated, can be played through every Hybrex handset speaker including Hybrex AH99 Analogue telephones connected to the system without the need for anyone to lift up their telephone handpiece. The trigger point - a press-button switch connected to specific ACP phone - would normally be located in the Reception area.

Utilising this feature in the Hospitality industry enables considerable benefit in that venue operators can easily communicate such an event to their Staff and Guests, alerting them to danger so everyone can be evacuated to safety in a timely manner.
